

**START YOUR DIGITAL
TRANSFORMATION
WITH US**

Digital Services

We are proud of our communication network of fibre cables, radio links and 4G/5G, providing so many with high-capacity, resilient and low-latency connectivity.

We are always looking to improve - our goal is to always be the preferred offshore network provider, and we are constantly expanding our infrastructure and improving our capacity.

WE CONNECT YOU TO THE CLOUD

With our subsea fibre optic network and 4G/5G LTE/NB-IoT coverage, Tampnet has brilliant infrastructure that enables digitalization of offshore operations withing oil & gas, maritime and wind energy. Once you are online, we can offer a world of opportunities

Connected Worker

Connected tablets, smartphones and wearables to our 4G/5G network, and get your data to the cloud.

IOT & OFFSHORE RIG MONITORING

Connect high-sensitivity sensors to our NB-IoT network, and get your data to the cloud

Security & AI

We protect our customers from cyber threats so that the offshore digital transformation can be executed without problems or set-backs. The market leading Darktrace Cyber AI platform is used by more than 3000 enterprises world-wide and will protect you from both external and internal threats.

WE ENABLE

The Connected Worker

- Crew with wireless devices will have real-time access to data
- Optimize planning and execution of day-to-day operations
- Collaborate across transition pieces, towers, nacelles, substations, jack-up vessels and crew transfer vessels
- Transparent coordination with control room operators and fellow workers

IoT & Offshore Rig Monitoring

- Remote monitoring with ultra-sensitive sensors that trigger inspection and maintenance
- Digital twin technology and the use of big data analytics for optimized performance
- Improved worker safety, especially for lone workers in hazardous working environments

Security & AI

- We protect our customers from cyber-threats so that the offshore digital transformation can be executed without problems or set-backs
- The Darktrace Cyber AI Platform will protect you from both external and internal threats

OPERATIONAL AI FOR ENERGY

Real-time monitoring

OpsSafety ensures safety and compliance in industrial settings by excelling in challenging conditions like diverse camera angles, tough lightning and complex scenes

Proactive maintenance

OpsInsight leverages advanced AI to transform raw sensor data into actionable insights, enabling real-time analysis or predictive maintenance to optimixe performance, prevent failure and improve decision-making.

Maximize existing data

Maximize investments in existing infrastructure by seamlessly integrating with your current camera and sensor system
